

Select Engineering, Inc. is looking for either a part-time or contract Senior Process Engineer with at least 8 - 10 years of experience in the oil & gas industry. This position is responsible for process designs for mid-stream, gathering, refining, and petrochemical industries. This requires a detailed understanding of process modeling, safety, operations, feed variations, control philosophy, and design codes to turn a process from an idea to a well-designed operating plant. This is a critical position to start the engineering design process and fix the conditions for operating the plant.

Must have the ability to turn process modeling into process specifications for mechanical, instrumentation, controls, electrical, and civil engineering understanding. A good name in the mid-stream industry is required. Some travel should be expected for this position.

A Bachelors (or higher) Degree in Chemical Engineering and a P.E. is required. Knowledge of the following computer software skills is required: ProMax, Hysys, FlareNet, MS Office products.

Select Engineering, Inc. is a growing company with core values of Integrity, Honesty, Quality, and Teamwork. If you possess these core values, skills, and requirements listed, please send me your resume. You may contact either Bevan Collins or Janice Cook at 918-592-1133 for more details.

We do require drug testing and background checks for all positions.

Thank you for your consideration.
